Continuation of 11. does NOT place the application in condition for allowance because: Applicant's arguments filed 2/22/08 have been fully considered but they are not persuasive. Applicant argues that Kobayashi teaches a turntable, but not at an incline as the Applicant's invention. Kobayashi discloses rotating the turntable about the longitudinal axis by the specified angle and slide means for sliding the turntable in its radial direction. Applicant further argues that the positioning of the receiving recess, which as claimed receiving recesses (P) receive the waterproof seal (2) with top thereof directing a center of the receiving portion (Fig. 1). Kobayashi discloses in Fifure 1, the waterproof seal (2) in recess (12) on top of the receiving portion (10). Kobayashi then teaches waterproof plugs (2) is picked up by the pin member of the conveyor device moved upward and downward (C6 L23-25) which is the direction of removing the plugs. Kobayashi does teach a vibratory means, where the Applicant does not, but it should not matter since Kobayashi teaches the other claimed features. Applicant further argues that Kobayashi does not teach a cover, but as shown in Figure 1, cover (10) mounting on support member (20) restricting the movements of the waterproof seals (C4 L15-20). For the foregoing reasons, claims 1-4 stand rejected.
